

Multi Directional Forklift

Used Side Loader Forklift Pasadena - A side loader forklift truck is made for lifting very heavy and long items within the confines the narrow aisles of a warehouse, lumber yard, loading dock or other facility. Side loaders have earned their name due to their design and the way they transport, load and unload items. Benefits of Side Loader Forklifts v Standard Forklifts Forklifts that rely on the original counterbalance system can become unstable when moving long or heavy loads. However, the side loader forklift is specially designed to handle these types of loads, such as long pipes and raw timber, providing much more stability. Long loads such as timber, steel or pipes are more easily handled because the load is facing in the direction being traveled, reducing the overall width of the equipment and load. They also offer the advantage of providing the driver of the forklift with an unobstructed view, which is otherwise at least somewhat or greatly impeded by the tines and load carried at the front on a standard forklift. Side loaders can access narrow aisles and tinier doorways with ease since loads are transported down the side of the machine instead of on the front as with a standard forklift. The load may have to be raised on regular forklifts to travel around obstacles that increase the chances of tipping over. A side loader forklift makes much of that maneuvering unnecessary. These units help warehouse locations to manage smaller spaces much more safely. Programmable travel speeds can be found on many models. Units can lift up to twelve thousand pounds and travel at speeds greater than five miles an hour. Programmable travel speeds are useful for allowing operators to match speed for particular jobs. Types of Side Loader Forklifts Class 2 - Electric Motor Narrow Aisle Trucks Side loader forklifts often fall under the Class 2 - Electric Motor Narrow Aisle Trucks classification. This kind of forklift classification covers electrically sourced narrow aisle forklifts. The side loader is useful for handling long and narrow loads in similar locations including lumber, carpet and laminate. These machines are additionally used for rack storage and feeding machine tools. Narrow aisle locations are popular in warehouses for allowing maximum storage design and efficiency. Class 2 side loader forklifts have been designed to take up less space by the forklift truck. These machines create better efficiency and speed while moving, unloading and loading narrow aisle locations. Electric power reduces harmful emissions and allows these machines to be used mainly inside. Internal Combustion Engine Side Loader Forklifts Only side loaders that rely on electricity are in the Class 2 forklift classification. Side loaders are found in timber and lumber yards and pipe and steel yards for transporting long and heavy loads. They can move items from flatbed trucks, stack items in blocks or racking. These machines that are used outside have to deal with uneven ground and different temperatures. This means an internal combustion engine and, sometimes, pneumatic tires are a better option for the job. Side loaders can efficiently load cumbersome items that are long and heavy by securing them in the middle. Side Loader Forklift Design The side loader forklift comes in two basic designs: 1. Stand on; and 2. Sit down. Stand On Side Loader Forklifts Stand-on side loaders are found in warehouses and interior applications. They feature a small platform generally found in the middle of the unit that is where the operator stands and is surrounded by controls. There are several advantages to this design. It creates a more compact machine and smaller cab design since there is no seat for the operator. A forklift operating with a smaller footprint is excellent for working in hightraffic locations. Especially while operating in reverse, there is greater operator visibility from a standing position. In the stand up position, an operator can turn his whole body to view the rear of the truck when reversing direction whereas in a sit down position the operator must twist his back and neck to get a clear view behind. This is clearly an advantage in terms of safety as well as comfort. Increased operator visibility also helps to decrease damage to products and facilities. Operators can get onto and off of the stand up forklift faster compared to a sit-down model and this may increase efficiency in certain situations. Sit Down Side Loader Forklifts The sit-down side loader is more popular than standing loaders. Sit-down side loaders have a cab that is situated in the center of the machine. The difference that a sit down forklift has a raised

platform with a seat facing the forklift's control panel. Operator comfort is one of the main advantages of the sit-down side loader. The machine enhances productivity and reduces fatigue when operators can work from a resting position. Customizable Features Customizable bed lengths are a feature and benefit of side loader forklifts. The standard bed length for a side loader was designed to fit a variety of bulky and heavy loads but this can be extended upwards of 60 inches to meet custom jobsite applications. Side loaders need to consider aisle widths and guide rails prior to customization. Multidirectional abilities are one of the most popular features of these machines. Crab steering on side loaders refers to having two wheels function independently from the other wheels. Crab steering allows the unit to travel in all four directions by changing the direction of the wheels. The side loader can fit into close quarters and narrow spaces without needing to make huge turns or adjustments. The smaller turning radius helps to avoid damage to items and the building while increasing safety. More efficiency is attained since there are less space and time needed to move around the job site. Numerous side loader features can be customized to suit a job site. Tine length, mirrors, lights, lift mast heights and lift capacities are some of the custom options available. Certain features are also adjustable, allowing for further customization of the side loader for the particular job application. Travel speed, acceleration time, load limits and breaking force can all be set allowing further job efficiency and increased workplace safety. For all of the above reason, the side loader forklift has become the most popular option for workplaces where space is limited and long loads are involved.
